

**Medication Management**  
**(ARF Ordinance)**

Medication management training would compose of multiple trainings addressing both psychotropic medication as well as medical medication. Purpose of training would be for staff to have a understanding of the types of medication clients living in the program are commonly prescribed.

- 1) Psychotropic medication:
  - \*medication commonly used and what illness do they treat
  - \*side effects
  - \*brand names vs generic names
  - \*concerns for missed dose: when to notify provider; when can client take medication
  
- 2) Medical medication:
  - \*how they may interact with psychotropics
  - \*side effects
  - \*antibiotics: what to do if dose is missed; when to notify provider
  
- 3) PRN medication:
  - \*PRN's most commonly used
  - \*side effects to look for and when to notify provider of observation

According to the ARF Ordinance; these trainings will be in addition to the annual medication management trainings provided by the ARF and RCFE Program Administrators per Community Care Licensing (CCL) requirements.
