

# San Francisco Monthly STI Report

Data for June, 2022  
Report prepared August 9, 2022

Table 1. STIs among residents, June, 2022. Female syphilis cases include patients assigned as female at birth.

	2022		2021	
	month	YTD	month	YTD
Gonorrhea	426	2,713	442	2,112
Male rectal gonorrhea	149	1,035	143	676
Chlamydia	522	3,250	524	2,791
Male rectal chlamydia	176	1,040	171	802
Syphilis (adult total)	130	907	140	975
Primary & secondary	25	189	35	202
Early latent	67	414	56	399
Unknown latent	16	100	20	155
Late latent	22	204	29	219
Neurosyphilis	3	9	0	14
Congenital syphilis	0	3	0	1
Female syphilis	13	115	22	90

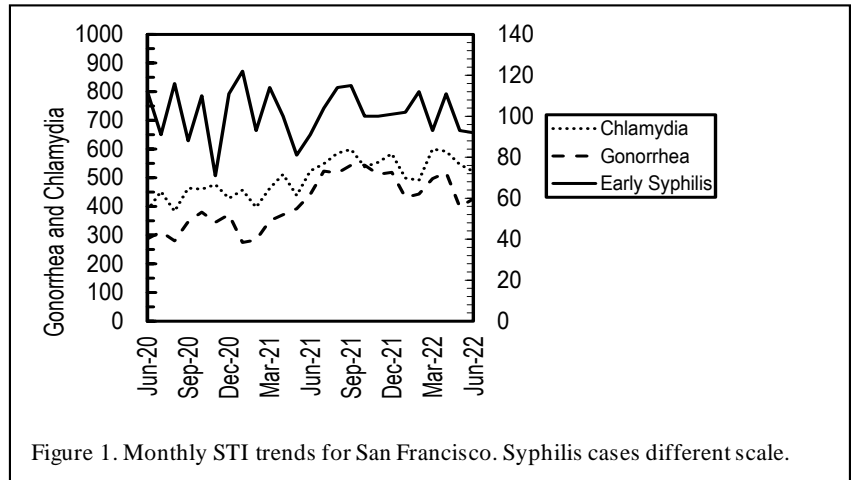

Figure 1. Monthly STI trends for San Francisco. Syphilis cases different scale.

Table 2. Selected STI cases and rates for San Francisco by age and race/ethnicity, 2022 through June only. Rates equal cases per 100,000 residents per year based on 2010 US Census Data.

	(All races)		Asian/PI		African American		Hispanic		White	
	cases	rate	cases	rate	cases	rate	cases	rate	cases	rate
<i>All ages</i>										
Chlamydia	3,250	807.2	326	245.4	293	1,252.7	485	796.6	845	500.8
Gonorrhea	2,713	673.8	270	203.2	246	1,051.7	471	773.6	1,009	598.0
Early syphilis	603	149.8	78	58.7	66	282.2	153	251.3	206	122.1
<i>Under 20 yrs</i>										
Chlamydia	242	870.6	16	144.5	49	2,083.8	32	505.9	18	293.6
Gonorrhea	62	223.1	3	27.1	17	722.9	11	173.9	6	97.9
Early syphilis	4	14.4	0	0.0	2	85.1	1	15.8	1	16.3

Table 3. HIV testing among City Clinic patients, June, 2022.

	2022		2021	
	month	YTD	month	YTD
Tests	326	1,949	310	1,420
Antibody positive	8	24	3	16
Acute HIV infection	1	3	0	2

Note: All statistics are provisional until the annual report is released for the year. Morbidity is based on date of diagnosis. Totals for past months may change due to delays in reporting from labs and providers.

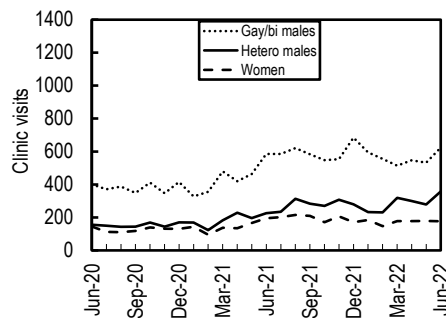

Figure 2. City Clinic visits by gender and orientation.

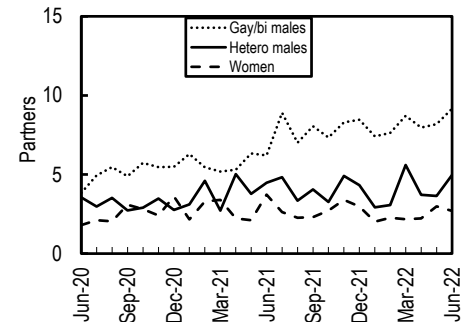

Figure 3. Average number of recent\* sex partners for City Clinic visits by gender and sexual orientation. \*Recall period is 3 months.

## Increasing Monkeypox Cases in San Francisco

In early June, the first case of monkeypox was identified in San Francisco, and as of July 25, 2022, a total of [215 cases](#) have been identified among SF residents. The current monkeypox outbreak is predominantly occurring among men who have sex with men (MSM) and trans people who have sex with men. This is believed to be related to transmission via close and/or intimate contacts within sexual and social networks. Monkeypox symptoms can mimic symptoms of common STIs including syphilis and herpes.

See the latest SFPDPH [health advisory](#) (7/15/22) that provides guidance for SF providers including:

- [Initial evaluation, testing, and specimen collection](#)
- Infection control precautions
- [Updated eligibility for the monkeypox vaccine \(Jynneos\)](#)
- [Patient educational materials](#)

You can continue to find updated monkeypox guidance for SF providers at [www.sfdcph.org/monkeypoxHCP](http://www.sfdcph.org/monkeypoxHCP).
